BANGLADESH AI BUSINESS SUMMIT 2026 · EXPRESSION OF INTEREST, UNIVERSITY STUDENTS

CricMind

Cricket intelligence where every number is checked before you see it

---

BRIEF IDEA

Cricket decisions in Bangladesh, from franchise auctions to match plans, still run on spreadsheets and gut feeling. AI chatbots could help, but they can confidently invent statistics. With money and careers at stake, that's dangerous.

CricMind is an AI cricket analyst built to stop that. Coaches, scouts and franchise owners ask questions in plain language and get a report written for their role. Only trusted calculation engines produce numbers, and a verification gate checks every figure the AI cites. In testing, it caught a planted fake statistic.

So Bangladeshi teams can decide on evidence, not gut feeling.
